DETAILED ACTION

Drawings

1. The drawings are objected to because the labels Fig. 3A-3C, Fig. 4A-4B and Fig. 5A-5C differ from the 3a-3c, 4a-4b and 5a-5c described in the specification (see pages 10 and 11). Also, on page 11, lines 7-8, the “4” is missing before (a) and (b), lines 14-18, the “5” is missing before (a), (b) and (c) and lines 23-25, the “6” is missing before c, (a), (b) and (c). The labels of Figures in Drawing should be consistent with the description in the specification. Applicants can either correct the specification or drawings to avoid confusing.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The optical properties of the mixture must be adjusted to have at least one of the refractive indices below the refractive index of the silica, which is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure.

See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). See page 8, lines 4-5 in the specification.

4. The term "relative low viscosity" in claim 1 is a relative term, which renders the claim indefinite. The term "relative" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprized of the scope of the invention. Also, there is not defined in the specification.

5. Claim 13 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The component (c) is an additive having a relative low viscosity, which is confused with the optical properties cited in claim 13.

6. Claim 16 is objected to because of the following informalities:

See line 3, the word "betwe n" is a typographical error. It should be changed to --
between--.

Appropriate correction is required.

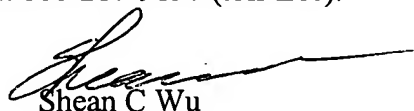

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior arts cited in IDS and PTO-892 fail to disclose the present mixture, which the present invention can be used in optical waveguide tuning applications because the present liquid crystalline mixture has a low refractive index as compared to silica, a low surface interaction energy with silica, a broad thermal range of mesogenic phase and a positive or negative dielectric anisotropy at low frequency.
